Cutters

Many landscapers have dreaded the 3 step process of power edging, tilling and then shoveling the dirt in. The Dirt Miser makes this a one step process by using a cutter with tapered tiller tines on it. The customer can order whatever width and taper of till he likes.

The Icon trench for curbs can be any shape and size. When ordering cutters, use the diagram to specify D for Depth, W for Width and A for Angle. This cutter will minimize your prep time and bring the professional look to your jobsite.

This is the irrigation trench. It can be any width and as deep as 12". A 2" x 10" cutter is sufficient for most applications and can cut at the rate of 40 feet per minute on a 20 Hp Walker.
A Stump Grinding cutter to come in the future...
